GOOGLE BUSINESS PROFILE OPTIMIZATION

Local SEO Project Report

YADEIN / SANGNA FRAME

Morbi, Gujarat, India

Project Focus	Local SEO, profile optimization, keyword research, product presentation, and performance analysis
Primary Platform	Google Business Profile
Other Listing Reviewed	IndiaMART — Sangna Frame

Prepared as a practical local SEO project report

1. Introduction

In today's digital environment, an online presence is important for businesses that want to reach potential customers. Google Business Profile helps businesses display their information on Google Search and Google Maps. It allows customers to discover business locations, view product photographs, check contact information, and obtain directions.

This project focuses on optimizing the Google Business Profile of **Yaadein / Sangna Frame**, a photo frame manufacturing business located in Morbi, Gujarat. The project involves reviewing business information, researching relevant local SEO keywords, presenting products online, reviewing business listings, and analyzing available profile performance data.

The main purpose is to improve the business's online discoverability and identify opportunities to attract relevant customers through local search.

2. Project Overview

Project Title	Google Business Profile Optimization for Yaadein / Sangna Frame
Business Location	Morbi, Gujarat, India
Business Type	Photo frame manufacturing
Primary Platform	Google Business Profile
Other Platform Reviewed	IndiaMART
Project Focus	Local SEO, profile optimization, keyword research, product presentation, listing review, and performance analysis

3. Project Objectives

- Review and optimize the Google Business Profile.
- Research relevant local SEO keywords.
- Improve the business description and product information.
- Review business information consistency across online listings.
- Analyze Google Business Profile performance.
- Identify opportunities for further local SEO improvement.

4. Business Profile Overview

Yaadein / Sangna Frame is a photo frame manufacturing business based in Morbi, Gujarat. Its online presence allows potential customers to learn about the business, explore product photographs, and locate the business through Google.

The profile review covered the displayed business name, category, address and contact information, business description, product listings, photographs, posts, and available performance metrics. The name is recorded in this report as **Yaadein / Sangna Frame**, reflecting the current Google Business Profile display name supplied for the project.

The IndiaMART listing uses the name **Sangna Frame**. The two names are documented as they appear on the respective platforms; future updates should reflect the real-world business identity accurately and consistently.

5. Methodology

Step 1 — Profile Review

Reviewed the existing Google Business Profile information and identified areas relevant to profile completeness and customer discovery.

Step 2 — Keyword Research

Used manual Google Search exploration to identify phrases related to photo frame manufacturing, supply, and products in Morbi.

Step 3 — Profile Optimization

Reviewed and updated the business description to include relevant local search terms naturally.

Step 4 — Product Presentation

Reviewed product names, descriptions, and photographs, and published product-focused profile posts.

Step 5 — Online Listing Review

Reviewed the IndiaMART listing under the name Sangna Frame as another source of online business information.

Step 6 — Performance Analysis

Recorded the available profile performance metrics for the selected reporting period.

Step 7 — Search Visibility Observation

Performed manual searches for selected keywords and documented the results observed during the checks.

6. Work Completed

- Reviewed the Google Business Profile information.
- Documented the profile display name as Yaadein / Sangna Frame.
- Reviewed the primary business category.
- Updated the business description to include relevant local keywords naturally.
- Reviewed product names, descriptions, and photographs.
- Added product photographs and product information.
- Published Google Business Profile posts featuring products.
- Reviewed the IndiaMART listing under the name Sangna Frame.
- Recorded available Google Business Profile performance metrics.
- Tested relevant Google Search queries.
- Identified opportunities for future local SEO improvement.

7. Keyword Research

Keyword research helps a business understand the phrases potential customers may use when searching for products or services. The keywords below were selected based on the business's location, manufacturing activity, and product range.

Primary local keywords

- photo frame manufacturer in Morbi
- photo frame manufacturers in Morbi Gujarat
- frame manufacturer in Morbi
- photo frame supplier in Morbi

Product-related keywords

- folding photo frame
- multi-photo frame

These keywords are potential targets for relevant business descriptions, product details, posts, and future website content. The list was developed through manual Google Search exploration. Search volumes, keyword difficulty, and monthly demand were not measured with a dedicated keyword research tool; therefore, these terms should be treated as relevant keyword ideas rather than verified high-volume keywords.

8. Search Visibility Observations

During the manual Google searches conducted for this project, the business appeared for the query **“frame manufacturer in Morbi.”** It was not visible in the observed results for **“photo frame manufacturer in Morbi”** and **“photo frame manufacturers in Morbi Gujarat.”**

These findings represent the results observed during the specific searches performed. Search results can vary based on location, time, device, search history, and other factors. The observations do not establish a fixed ranking position or prove that optimization caused a ranking improvement.

The results indicate an opportunity to continue improving profile completeness, product relevance, business information consistency, and the overall online presence.

9. Google Business Profile Performance

Reporting period: **August–October 2026**, as supplied for this report.

Metric	Observed result
Business Profile interactions	105
Direction requests	105
Calls	0
Chat clicks	0
Bookings	0
Website clicks	0

The recorded data indicates that direction requests accounted for the reported profile interactions during this period. No calls, chat clicks, bookings, or website clicks were recorded in the supplied figures. These metrics provide a baseline for future monitoring and do not establish that recent optimization activities caused an improvement.

For meaningful evaluation, the business should compare equivalent reporting periods and continue recording metrics after future updates.

10. Online Business Listing Review

The business also has an IndiaMART listing under the name **Sangna Frame**. The Google Business Profile display name is recorded as **Yaadein / Sangna Frame**. The names should be represented accurately on each platform according to the business's real-world identity, rather than changed solely to insert keywords.

IndiaMART listing: https://www.indiamart.com/sangna-frame/

Consistent business information can help customers recognize the same business across platforms. The project reviewed the listing name, but complete consistency of every business detail across all online directories was not independently confirmed.

11. Challenges Identified

- The business was not visible in every target keyword search tested.
- No website clicks were recorded in the supplied performance figures.
- Calls, chat clicks, and bookings were recorded as zero for the selected reporting period.
- Search visibility can vary by location, time, and search context.
- Search volumes and keyword difficulty were not measured using a dedicated SEO tool.
- Further monitoring is required to assess the impact of optimization activities.

12. Recommendations

Maintain accurate business information

Keep the profile name, category, address, phone number, hours, and description accurate and up to date.

Continue adding genuine product photos

Upload clear, high-quality photographs of actual products and keep product details informative and accurate.

Publish relevant updates

Continue posting genuine product updates when there is useful information to share.

Encourage genuine customer reviews

Invite real customers to share honest feedback without offering incentives or pressuring them.

Monitor keyword visibility

Repeat searches for the same target keywords under reasonably consistent conditions and record the date and observed result.

Review listing consistency

Check business information across relevant platforms and correct discrepancies where appropriate.

Consider a website or product catalogue

A simple website or catalogue could provide more product information and a destination for customer enquiries.

Track performance over time

Review profile interactions and individual action metrics regularly, then compare equivalent periods.

13. Limitations of the Project

- Search visibility was checked manually for selected queries and does not represent a complete ranking study.
- No dedicated keyword tool was used to verify search volume or keyword difficulty.
- The supplied performance metrics are a snapshot for the stated reporting period.
- The data does not establish a causal relationship between profile changes and performance.
- The review of the IndiaMART listing does not confirm that all business details match across every online platform.

14. Conclusion

This project provided practical experience in Google Business Profile management, local SEO keyword research, business listing review, product presentation, and performance analysis. The profile for Yaadein / Sangna Frame was reviewed, relevant keywords were identified, product information and posts were addressed, and available performance metrics were documented.

The observations identify opportunities to improve online discoverability and customer engagement. Continued maintenance, accurate information, genuine customer feedback, relevant product content, and consistent performance monitoring will be important for evaluating future progress. No specific ranking improvement is claimed based on the limited manual checks conducted.

15. Tools Used

- Google Search
- Google Business Profile
- IndiaMART
- GitHub

16. Evidence and Documentation

The project can be supported with screenshots of the Google Business Profile overview, business information and description, product listings and photographs, published posts, keyword searches, IndiaMART listing, performance metrics, and the GitHub repository. Screenshots should show the actual work performed and should not be edited to imply results that were not observed.
